

Calculating the Dates for the Yearly Moedim

Several people have asked about the Moedim dates I have provided over the past two years as to which date is correct. I have asked the same question.

The given dates on the Hebrew Calendar, the Gregorian Calendar, and the Dead Sea Scrolls calendars do not seem to correspond to the New Moon dates plus x amount of days after Rosh Chodesh as expected by our scriptures.

According to the Bible, it is only the sighting of the New Moon which sets the date for Rosh Chodesh (First Of The Month) on Yahweh's calendar – not modern calendars!

So, what day does one actually pick to celebrate or start a days-long holiday?

My suggestion is to take the date of the New Moon, and count off the number of days needed to get to the date stated by the Bible.

For instance, we know that Pesach is always on the 14th of Nisan. Start at Nisan 1, add thirteen days which brings it to the fourteenth day, and use that day to begin the celebration. Also note that when the new moon arrives after 6 PM, on the Hebrew calendar it is actually on the next day, so start counting from the new day's date!

Conclusions

We do not know the exact day or hour when the Moedim will actually be fulfilled according to Yahweh's Divine Appointments Calendar – his daytimer. But we do know how to calculate an appropriate date to practice the dress rehearsals for the real event.
